

DESCRIPTION

Polar Pellets immediately melt snow and ice from parking lots, sidewalks, stairways; anywhere ice and snow constitute a hazard. They generate their own heat and work 20 to 30 times faster than salt.

FEATURES

- Works to -25°F where rock salt does not work at temperatures less than 25°F
- Remains active to melt oncoming snow
- Leaves no white residue to track into buildings, stain shoes, etc.
- Will not harm grass or shrubs
- Will not pit or etch concrete

CAUTION

Please refer to the SDS for more detailed precautionary measures, handling instructions and emergency procedures. **KEEP OUT OF REACH OF CHILDREN.**

DIRECTIONS

- Sprinkle lightly and evenly over ice surface, about 2 lb. per 200 sq. ft. (1 coffee can holds about 2lbs). Thawing begins immediately.
- As soon as ice is melted, slush and water should be promptly removed to prevent refreezing. The cycle of refreezing and thawing by natural weather elements can cause damage to concrete.
- The use of an ice melting agent increases these cycles and are factors over which we have no control.
- If this product is used on concrete of questionable quality, or in excessive amounts, there may be flaking and scaling of the concrete surfaces.
- When grass and shrubbery are adjacent to ice surface, particular care should be used to avoid excessive application as it could cause browning.
- The use of this ice melting compound must be at the consumer's risk.
